

# MonoMag Fluid Conditioning for Industry

**Reduce/eliminate chemicals and save fuel  
Make your facility more environmentally friendly with MonoMag**

MonoMag installed on incoming fuel line

**Fuel Applications with #2, 4, or 6 Oil, Propane and Natural Gas**  
MonoMag increases the oxygen bonding with the fuel molecules for a more complete burn. MonoMag also reduces carbon fouling and reduces CO and HC emissions. With more of the fuel being burned, you can reduce your fuel input – thereby saving fuel and saving money. Less carbon fouling also means less downtime and increased equipment life.

## #6 Oil Boiler Application

Three months' normal soot build up

Three months after MonoMag installation

## Water Applications

When you install MonoMag on your water system, you will be able to eliminate most chemical treatment. The reason is simple. MonoMag dissolves existing scale, which increases the thermal transfer. You will no longer need chemical treatment for scale and corrosion problems. Hydronic systems run smoother, with better water flow. Less energy consumed and fewer chemicals used saves money and increases equipment life.

## MonoMag Fuel and Water Applications

Boilers, Cooling Towers, Furnaces, Air Conditioning Systems, Hotels, Office Buildings, Restaurants, Laundries, Cars and Trucks, Dishwashers, Pools, Irrigation Systems
